Date: 2026-02-17 | Branch: sophia | Tester: 阿龙 (automated)

Total	Passed	Failed	Skipped	Pass Rate
14	11	1	2	79%

Test Cases

TC-01: Homepage Load — PASS

Category: Pages

测试目的: Verify homepage loads with all elements

前置条件: Frontend + backend running

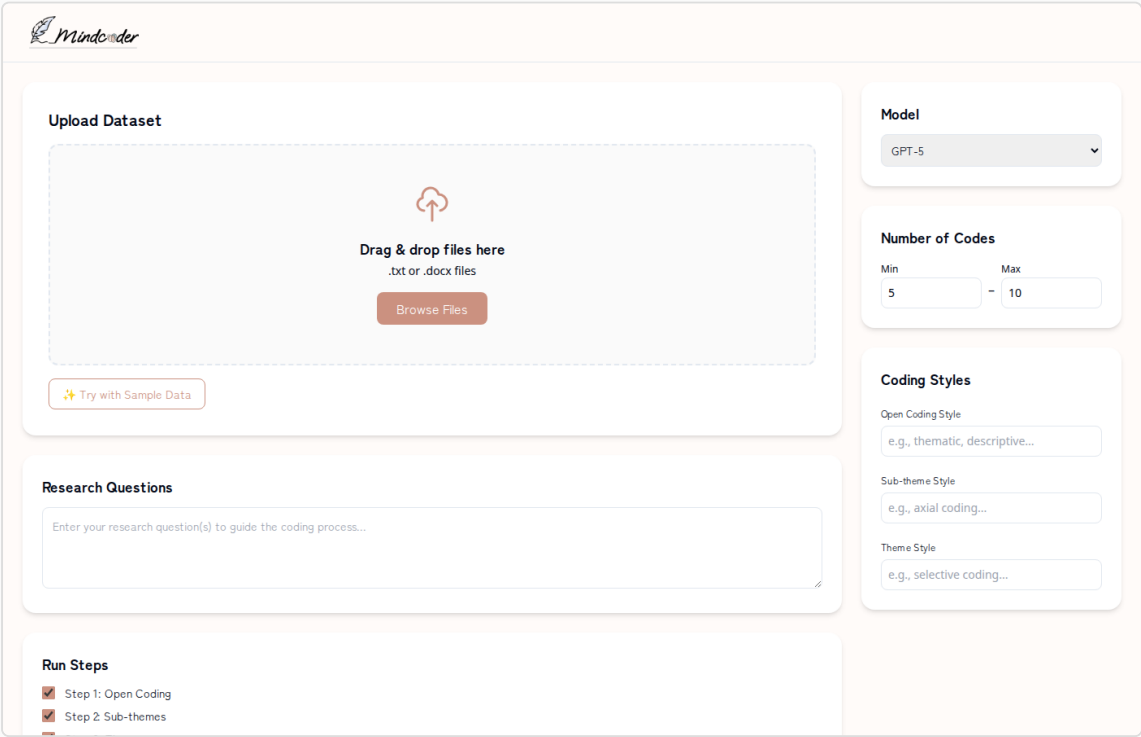

操作步骤:

1. Navigate to `http://localhost:5173/`

预期结果: Homepage with logo, navigation, sample data option

实际结果: Homepage loaded. Buttons: ['Browse Files', 'Try with Sample Data', 'Run MindCoder']. Links: []

截图:

TC-02: Upload Sample Data — PASS

Category: Core

测试目的: Upload sample data files via homepage file input

前置条件: Homepage loaded

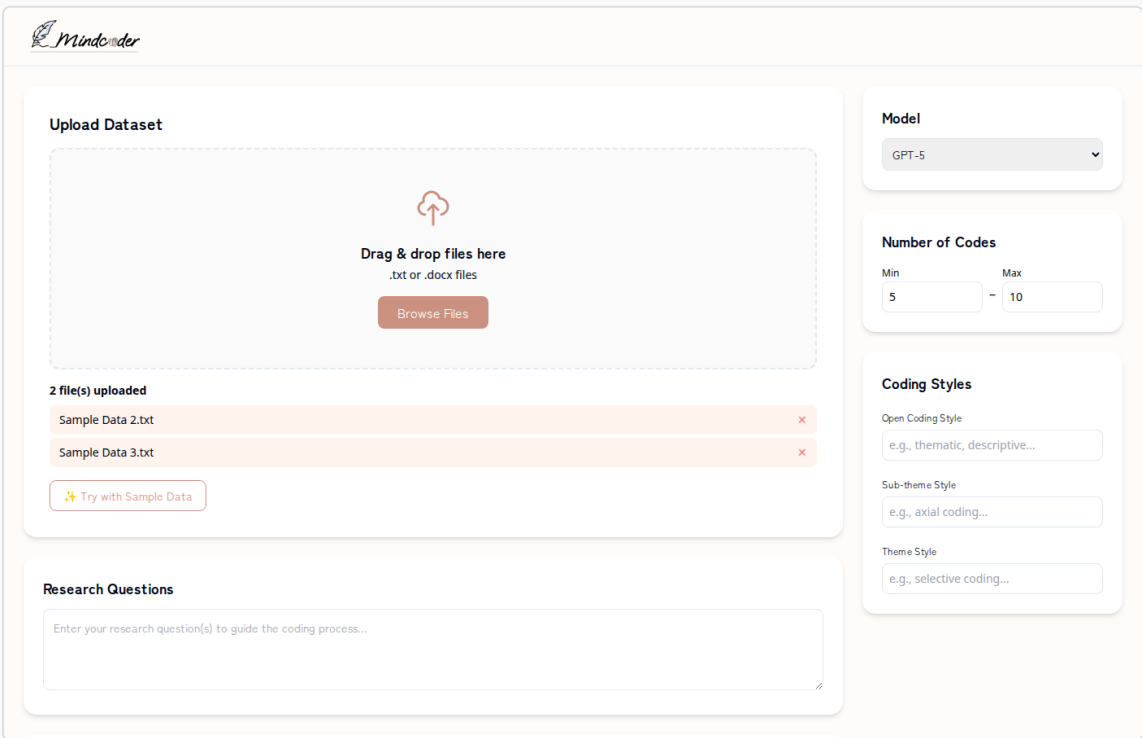

操作步骤:

- 1. Set sample .txt files on file input
- 2. Verify files appear in uploaded list

预期结果: Files uploaded and shown in file list

实际结果: Uploaded 2 files: ['Sample Data 2.txt', 'Sample Data 3.txt']. Files shown: True

截图:

TC-03: Run MindCoder Analysis — PASS

Category: Core

测试目的: Run full LLM analysis pipeline on uploaded sample data

前置条件: 2 sample files uploaded

操作步骤:

- 1. Click 'Run MindCoder' button
- 2. Wait for analysis pipeline (Open Coding → Sub-themes → Themes → Summary)
- 3. Verify navigation to analysis page

预期结果: Analysis completes within 180s, app navigates to Step 1 Open Codes

实际结果: Full pipeline completed in 338s. Final URL: <http://localhost:5173/#/reconstruction/project-1771311817464/1/card>

Apple laptop is 'greatest gadget'

The Apple Powerbook 100 has been chosen as the greatest gadget of all time, by US magazine Mobile PC.

The 1991 laptop was chosen because it was one of the first "lightweight" portable computers and helped define the layout of all future notebook PCs. The magazine has compiled an all-time top 100 list of gadgets, which includes the Sony Walkman at number three and the 1956 Zenith remote control at two. Gadgets needed moving parts and/or electronics to warrant inclusion. The magazine specified that gadgets also needed to be a "self-contained apparatus that can be used on its own, not a subset of another device".

"In general we included only items that were potentially mobile," said the magazine.

"In the end, we tried to get to the heart of what really makes a gadget a gadget," it concluded. The oldest "gadget" in the top 100 is the abacus, which the magazine dates at 190 A.D., and put in 60th place. Other pre-electronic gadgets in the top 100 include the sextant from 1731 (59th position), the marine chronometer from 1761 (42nd position) and the Kodak Brownie camera from 1900 (28th position). The Tivo personal video recorder is the newest device to make the top 10, which also includes the first flash mn3 player (Diamond Multimedia), as well as the first "successful"

AI Agent

Read your data and created initial open codes by grouping similar text chunks.

GENERAL APPROACH

Grouped text into open codes by topic similarity and preserved exact original text in chunks

SPECIFIC OBSERVATIONS

Patents: importance, timing, and costs — groups chunks about patent value, timing, and costs.

Investor alignment and long-term commitment — groups chunks about investor selection and holding period alignment.

Self-Reflection (3 points)

TC-04: Step 1: Open Codes - UI Elements — PASS

Category: Pages

测试目的: Verify all UI elements on Open Codes page

前置条件: Analysis completed

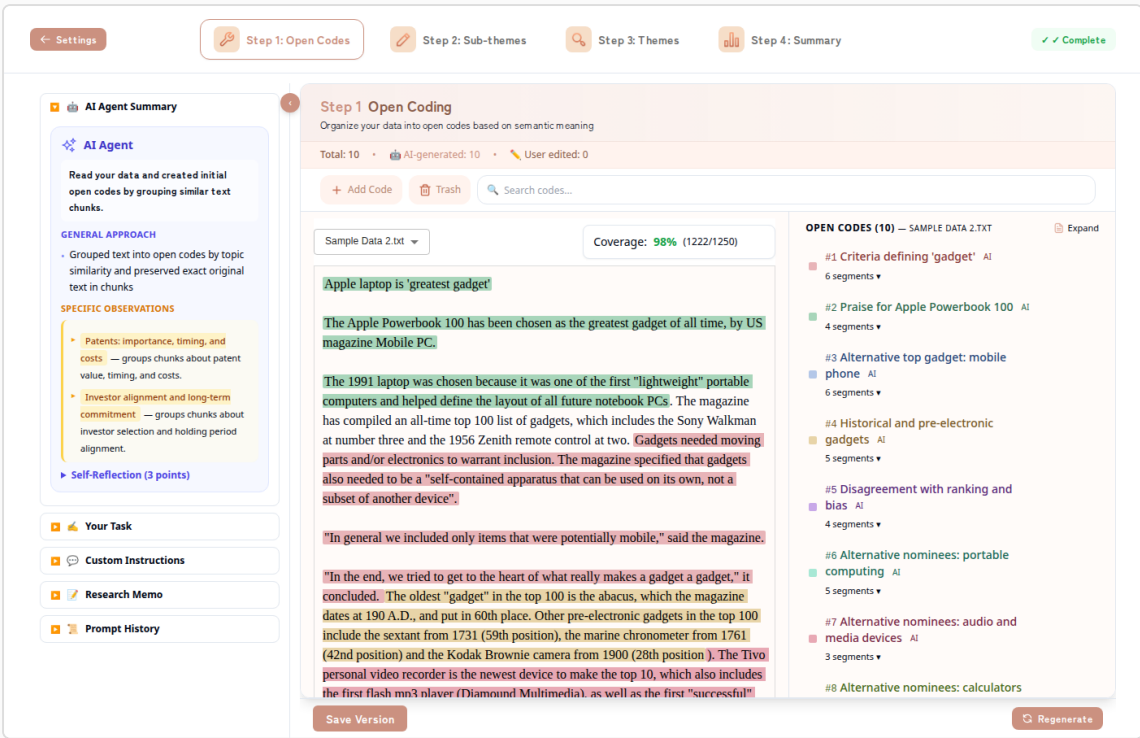

操作步骤:

1. Check code list
2. Check left panel sections
3. Check stats bar
4. Check regenerate button
5. Check file selector

预期结果: Code list, AI Agent Summary, Your Task (numbered), Custom Instructions, Research Memo, Prompt History, stats bar, regenerate button, file selector

实际结果: Code labels: 10; AI Agent Summary: 3; Your Task: 3; Custom Instructions: 3; Research Memo: 3; Prompt History: 9; Stats (Total): 1; Regenerate btn: 1; File selector: 0

截图:

TC-05: AI Agent Summary — ❌ FAIL

Category: UI

测试目的: Check sections

前置条件: Codes page

操作步骤:

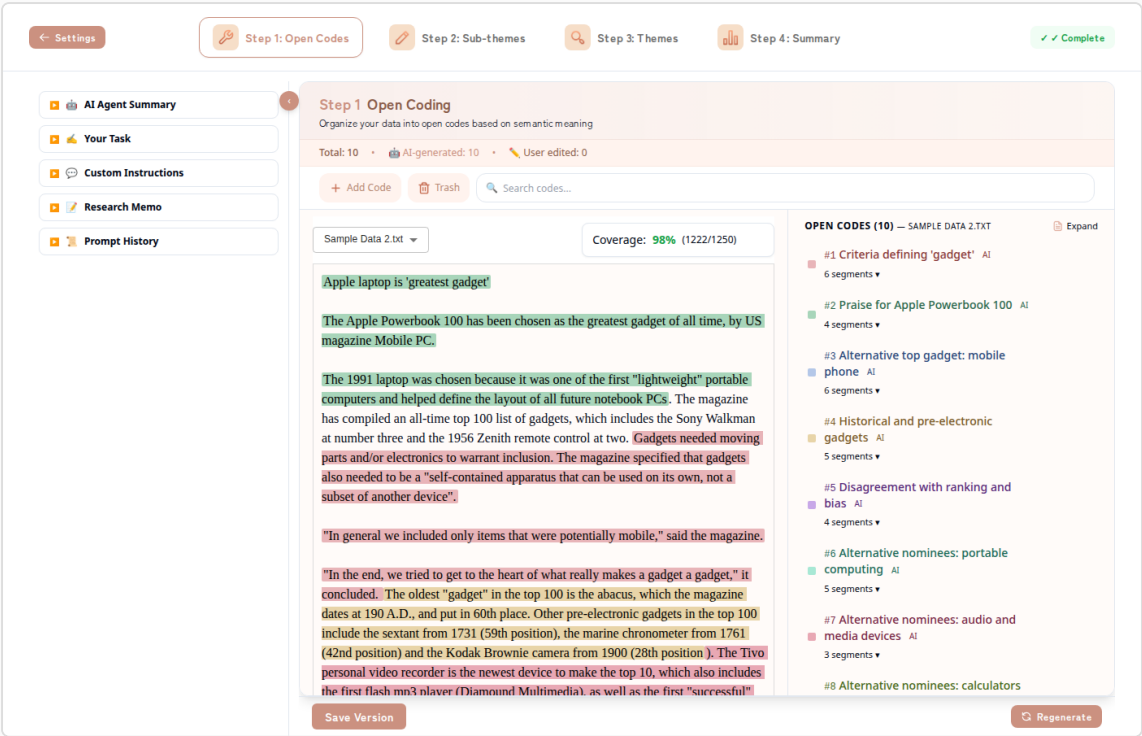

1. Expand summary

预期结果: Sections present

实际结果: ERROR: Locator.click: Timeout 30000ms exceeded. Call log: - waiting for locator("summary:has-text('Self-Reflection')").first - locator resolved to Self-Reflection (3 points)

- attempting click action 2 × waiting for element to be visible, enabled and stable - element is not visible - retrying click action - waiting 20ms 2 × waiting for element to be visible, enabled and stable - element is not visible - retrying click action - waiting 100ms 58 × waiting for element to be visible, enabled and stable - element is not visible - retrying click action - waiting 500ms

截图:

TC-06: Your Task Numbered Format — PASS

Category: UI

测试目的: Verify Your Task uses 1. 2. 3. numbered format

前置条件: Open Codes page loaded

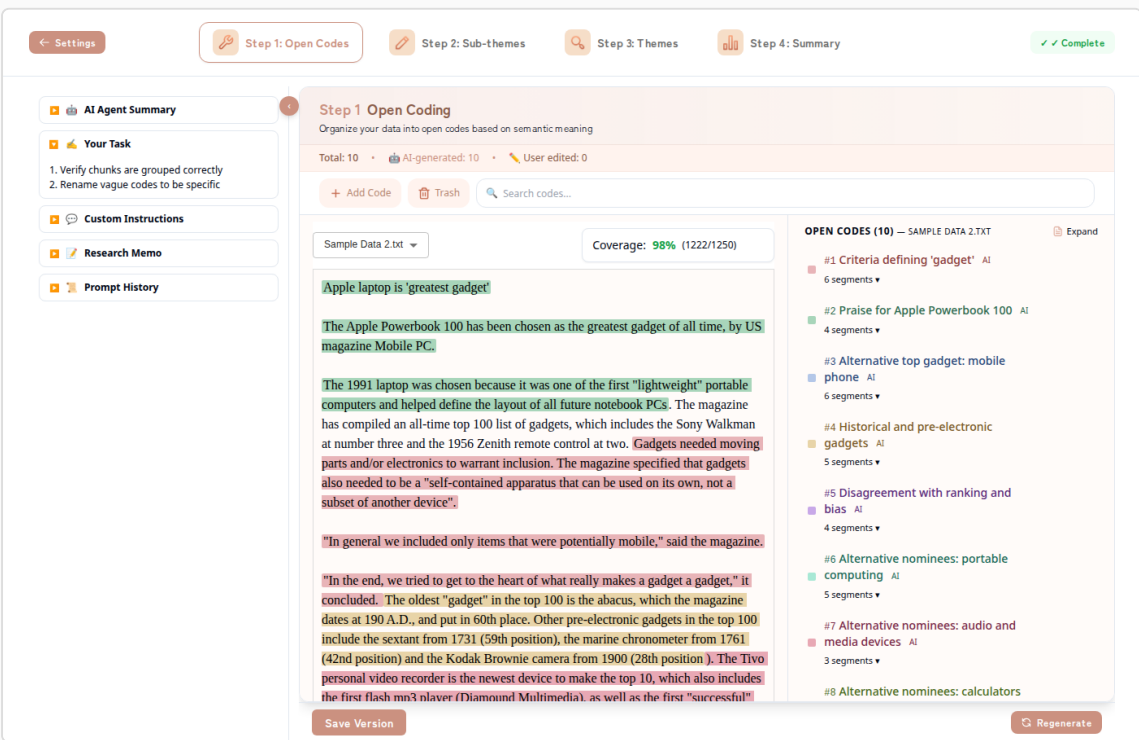

操作步骤:

1. Expand Your Task section
2. Verify numbered list format

预期结果: Tasks in numbered list: 1. Verify chunks... 2. Rename vague codes...

实际结果: Your Task section. Ordered list elements: 3

截图:

TC-07: Code Click → Editor Highlight — PASS

Category: Core

测试目的: Click a code to highlight its text in editor

前置条件: Open Codes with data

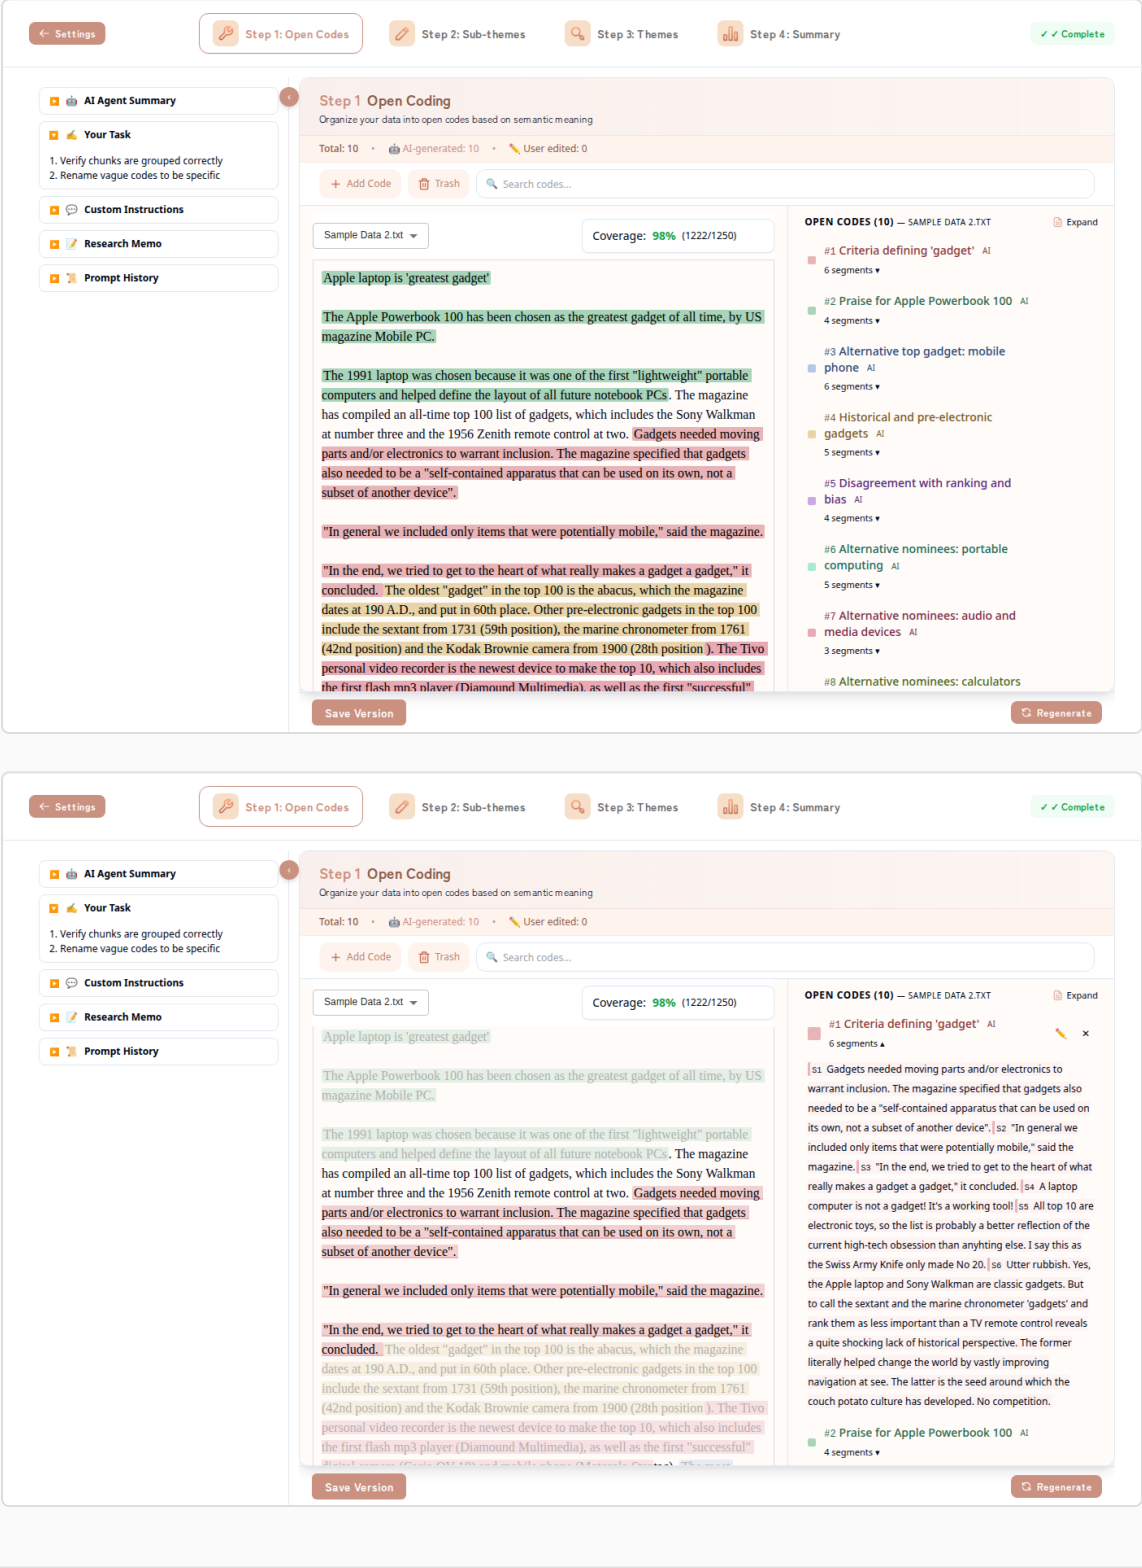

操作步骤:

1. Click first code label
2. Check editor for highlighted segments

预期结果: Text segments highlighted with code color, scrolls to first segment

实际结果: Clicked code. Highlighted segments: 45

截图：

TC-08: File Selector Filter — SKIP

Category: Core

测试目的: Verify codes filter by selected file

前置条件: Multiple files uploaded

操作步骤:

1. Find file selector
2. Select a specific file
3. Check codes list changes

预期结果: Only codes from selected file shown

实际结果: No file selector found

截图:

No screenshots

TC-09: Step 2: Sub-themes — PASS

Category: Pages

测试目的: Verify Sub-themes page has same layout as Open Codes

前置条件: Step 1 completed

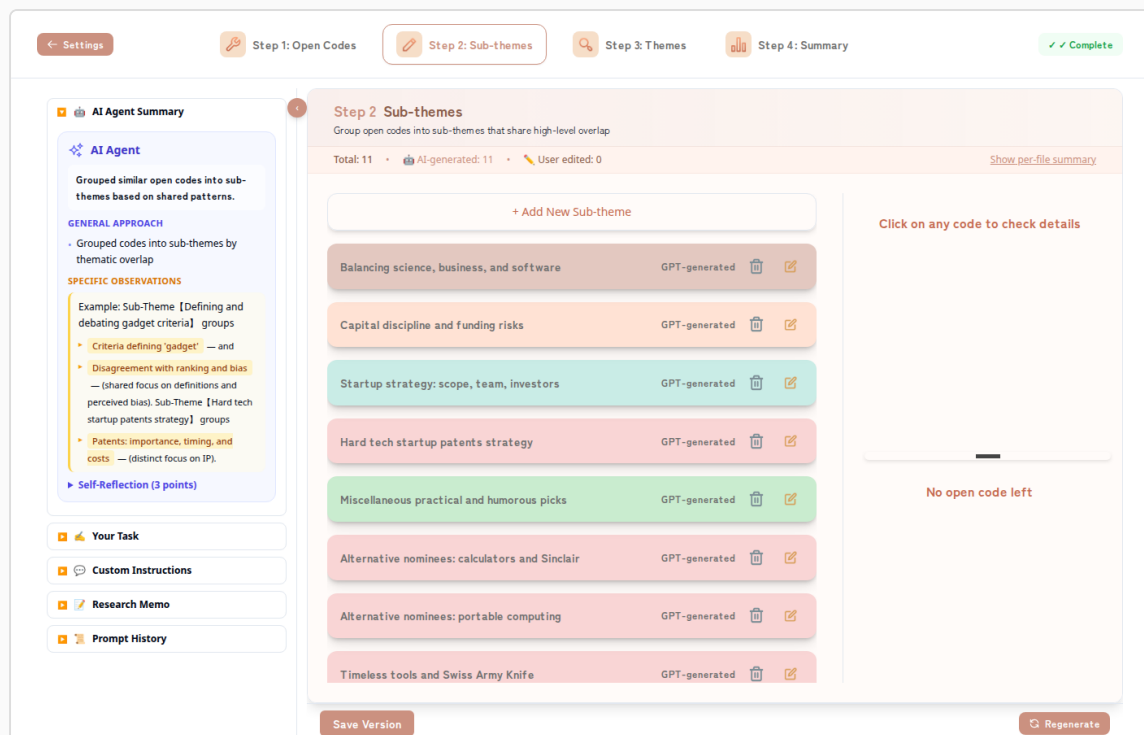

操作步骤:

1. Click Step 2
2. Check AI Agent Summary present
3. Check Your Task present
4. Check Research Memo present

预期结果: Sub-themes page with AI Agent Summary, Your Task (numbered), Custom Instructions, Research Memo

实际结果: Sub-themes page. URL: <http://localhost:5173/#!/labeling/project-1771311817464/2>. AI Summary: 3, Your Task: 3, Memo: 3

截图:

TC-10: Step 3: Themes — ⚠️ SKIP

Category: Pages

测试目的: Verify Themes page has same layout as Open Codes

前置条件: Step 2 completed

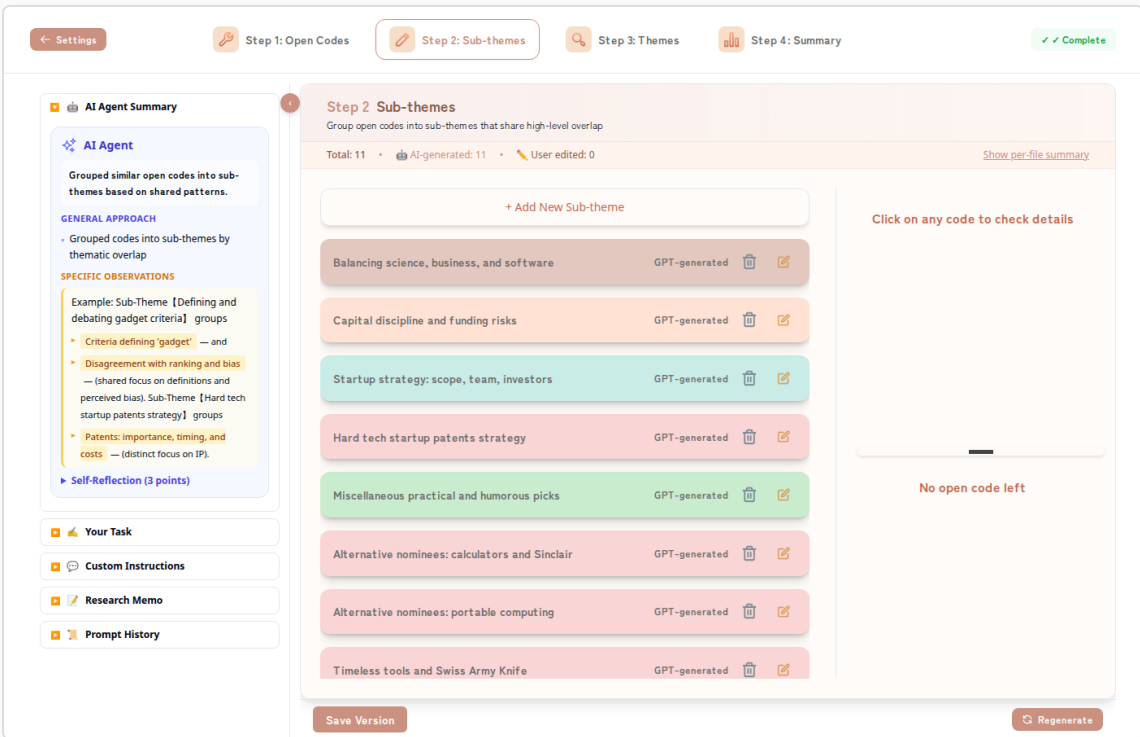

操作步骤:

1. Click Step 3
2. Check AI Agent Summary
3. Check layout matches Open Codes

预期结果: Themes page with consistent AI Agent Summary layout

实际结果: Themes page. URL: http://localhost:5173/#!/labeling/project-1771311817464/2. AI Summary: 3

截图:

TC-11: Step 4: Summary — PASS

Category: Pages

测试目的: Verify Summary page with PDF export

前置条件: Steps 1-3 completed

操作步骤:

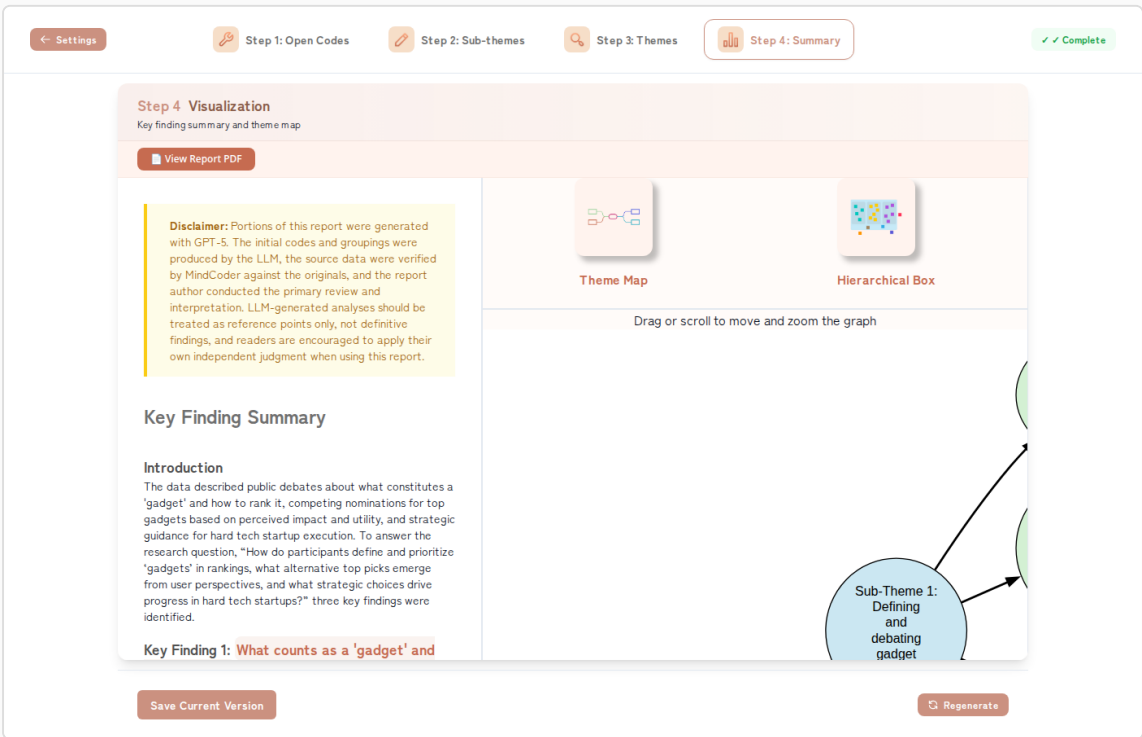

- 1. Click Step 4
- 2. Check for PDF export button

预期结果: Summary with visualization and PDF export

实际结果: Summary page. URL: <http://localhost:5173/#/visualization/project-1771311817464/4>.

PDF/Report option: 2

截图:

TC-12: Navigation to Home — PASS

Category: UI

测试目的: Verify Back/Home navigation works

前置条件: On analysis page

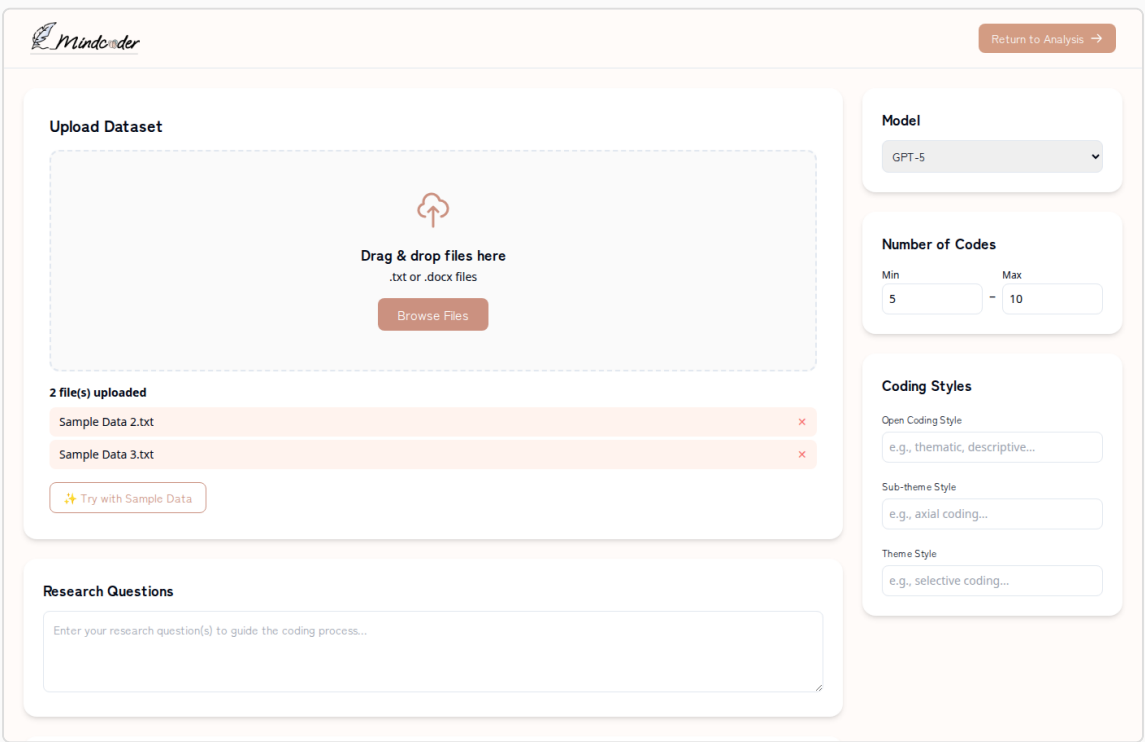

操作步骤:

- 1. Click Back/Home button

预期结果: Returns to homepage

实际结果: Navigated. URL: http://localhost:5173/#/

截图:

TC-13: Responsive Layout — PASS

Category: UI

测试目的: Verify layout at different widths

前置条件: App running

操作步骤:

1. Set viewport 1400px → screenshot
2. Set viewport 768px → screenshot

预期结果: Layout adapts to viewport

实际结果: Layout captured at 1400px and 768px

Run Steps

- ☒ Step 1: Open Coding
- ☒ Step 2: Sub-themes

TC-14: No Slider in Left Panel — PASS

Category: UI

测试目的: Verify Open Codes per File slider was removed from left panel

前置条件: Open Codes page loaded

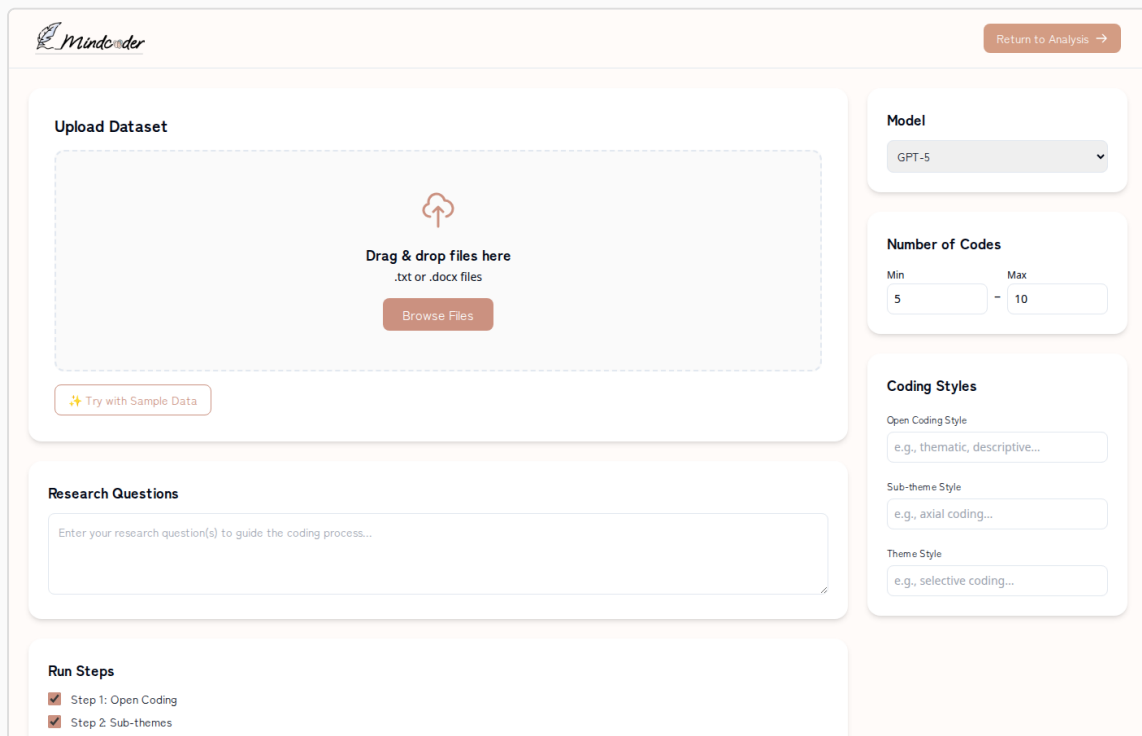

操作步骤:

1. Check left panel for 'Open Codes per File' section

预期结果: Section should NOT be present (removed, only in Settings)

实际结果: 'Open Codes per File' section in left panel: 0

截图:

Known Issues

- Sample data filenames in SampleDataPreview.tsx (Interview_X.txt) don't match actual files (Sample Data X.txt)

Conclusion

Full E2E test covering homepage, sample data upload, 4 analysis steps, UI elements, and recent UI changes (numbered Your Task, no slider, Self-Reflection labels).
